

Nitragin[®] Gold Clover

Pre-inoculant

clover

ATTENTION:

This specimen label is provided for general information only.

- This biological product may not yet be available or approved for sale or use in your area.
- It is your responsibility to follow all Federal, state/provincial and local laws and regulations regarding the use of biologicals.
- Before using any biological, be sure the intended use is approved in your state/province or locality.
- Your state/province or locality may require additional precautions and instructions for use of this product that are not included here.
- Monsanto does not guarantee the completeness or accuracy of this specimen label. The information found in this label may differ from the information found on the product label.
- You should not base any use of a similar product on the precautions, instructions for use or other information you find here.
- Always follow the precautions and instructions for use on the label of the biological you are using.

MINIMUM GUARANTEED ANALYSIS

ACTIVE: 8×10^7 viable cfu/g *Rhizobium leguminosarum* biovar *trifolii*

INERT: >99% Clay based carrier

NONPLANT FOOD INGREDIENT

Not a fertilizer substitute

WARNING: This product contains a chemical known to the State of California to cause cancer.

May cause respiratory tract irritation. Causes damage to lungs through prolonged or repeated exposure. Suspected of causing cancer by inhalation.

DANGER

Precautions

Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Wear eye protection protective gloves, and protective clothing. If exposed or concerned, get medical advice/attention. Store locked up. Dispose of contents/container to comply with applicable local, national and international regulation.

Red Clover: Treats 2,273 kg (5,000 lb) of seed

White, Ladino, Alsike Clover: Treats 1,136 kg (2,500 lb) of seed

Read this entire label before using the product. Use only according to label directions. Do not attempt to remove product from box by lifting the box liner. Liner could break releasing product. A scoop or pour method is recommended.

How it Works

Nitragin[®] Gold Clover Pre-inoculant is made specifically for clover. This product meets the demand for a convenient, high-quality pre-inoculant.

Nitragin Gold Clover Pre-inoculant is produced using a proprietary manufacturing technique employing effective nitrogen-fixing bacteria specially dried in a protective inorganic mineral carrier and ground to micron-size particles for the best seed adhesion. This blend of dry components creates an environment that is optimized for the survival of rhizobia bacteria over extended periods of time.

Directions for Use

Nitragin Gold Clover Pre-inoculant was developed for bulk treatment by the seed processor. It is a one step system that provides a convenient and economical inoculant for your customers.

Do not apply with water or sticker solution. Nitragin Gold Clover Pre-inoculant must be applied dry, directly from the carton.

Application Rate

Nitragin Gold Clover Pre-Inoculant

- Apply to clovers at the following rate:
Red clover – 189 g (6.67 oz) per 22.7 kg (50 lb) of seed.
White, ladino and alsike clovers – 378 g (13.3 oz) per 22.7 kg (50 lb) of seed.

Application Equipment

Nitragin Gold Clover Pre-inoculant may be applied conveniently in either a batch or continuous seed mixing system.

Batch Seed Mixing System

A batch system can provide repeated application of Nitragin Gold Clover Pre-inoculant with a potential reduction of calibration time. In batch seed mixing systems, the seed is first loaded into the mixer. Then the proper amount of Nitragin Gold Clover Pre-inoculant is added to the operating mixer and blended until the seed is uniformly coated, approximately 5 minutes.

Nitragin[®] Gold Clover Pre-inoculant

Continuous Seed Mixing System

A continuous system requires initial calibration of seed flow and Nitragin Gold Clover Pre-inoculant delivery, and periodic spot checking. Standard continuous seed treating equipment can be modified to provide a Nitragin Gold Clover Pre-inoculant treating system. Nitragin Gold Clover Pre-inoculant is metered into the auger mixing chamber to provide uniform application. It is necessary to calibrate both the seed flow rate and Nitragin Gold Clover Pre-inoculant application rate to achieve the desired coverage. A properly calibrated powder feeder is essential for obtaining the optimum treatment of Nitragin Gold Clover Pre-inoculant.

Powder Feeder

A Powder Feeder, such as either the Acrison 105 XF Powder Feeder with a hopper vibrator, or an AccuRate 602 Powder Feeder, is useful for the accurate application of Nitragin Gold Clover Pre-inoculant.

Seed Adhesion

To ensure optimal adherence to seed, Nitragin Gold Clover Pre-inoculant is manufactured under controlled conditions to produce a fine powder composed of very small and uniform particles. These micron-size particles adhere very well to the seed surface forming an even coating over each individual seed. The dry powder is simply mixed thoroughly with the seed to achieve this coating. Do not use water or stickers of any kind. Since there is no increase in moisture during the treatment process, there are no problems with caking of seed or material and no delays in proceeding to the bagging operation. When applied at the proper rate, Nitragin Gold Clover Pre-inoculant will thoroughly coat the surface area of the seed. The combination of proper rate and good adherence means less dust during the inoculation process.

Application to Seed Mixes

When the final seed mixture contains both a legume and grass, the preferred method of inoculating is to apply the recommended quantity of Nitragin Gold Clover Pre-inoculant to inoculate the total mixture. For example, with a mixture containing 1,816 kg (4,000 lb) of legume and 454 kg (1,000 lb) of grass seed, apply sufficient Nitragin Gold Clover Pre-inoculant to treat 2,270 kg (5,000 lb) of seed to the blended mixture.

Applicators and Other Handlers

The active ingredient in Nitragin Gold Clover Pre-inoculant nitrogen-fixing bacteria clover is *Rhizobium leguminosarum* biovar *trifolii* viable cells. Eye or skin contact, inhalation, or ingestion should be avoided. Wear standard protective clothing and equipment including gloves, safety glasses. Ensure adequate ventilation. Where exposure through inhalation may occur, wear an NIOSH-approved respirator. This product contains microorganisms that may have the potential to provoke sensitizing reactions; use appropriate personal protective equipment (PPE) to reduce exposure. In case of contact with skin or eyes, immediately flush exposed areas with plenty of water. Get medical attention if irritation occurs.

Storage and Disposal

The active ingredients in Nitragin Gold Clover Pre-inoculant nitrogen-fixing bacteria clover are living organisms and require specific storage conditions to ensure viability and product performance. To maintain product viability:

- Store bags under cool conditions <68°F (20°C) away from sunlight and direct heat sources.
- Minimize temperature fluctuations.
- Avoid freeze/thaw cycles.
- Use entire contents of bag within 24 hours after opening. Do not store opened bags of Nitragin Gold Clover Pre-inoculant.
- Use before the expiration date. The expiration date is valid only for unopened bags stored under the conditions listed above.
- Use this product only in well-ventilated areas.
- Keep out of reach of children.

The Nitragin Gold Clover Pre-inoculants are produced in a dry form, which stabilizes the bacteria and allows for long term survival. Moisture activates the bacteria. If the bacteria are activated prior to planting, survival is drastically reduced. To ensure product quality, inoculants and inoculated seed must be kept dry.

Unused Nitragin Gold Clover Pre-inoculant should be disposed of in accordance with applicable federal, state/provincial, and local requirements. Seed treated with Nitragin Gold Clover Pre-inoculant is not recommended for food, feed or oil purposes.

Limited Warranty

The Seller warrants that this product contains a minimum number *Rhizobium leguminosarum* biovar *trifolii* viable cells, as specified on this label. The Seller makes no other warranty expressed or implied as to product viability or performance since product storage, use and growing conditions are beyond the Seller's control. Seller's guarantee is limited to the terms set out on the label and subject thereto. Buyer assumes the risk to persons or property arising from the use or handling of this product and accepts the product on that condition. If this product does not perform as warranted above, and to the extent consistent with applicable law, customer's sole remedy for breach of warranty shall be replacement of the product or refund of the purchase price paid, at the option of Monsanto Company.

EXCEPT AS PROVIDED ELSEWHERE IN WRITING CONTAINING AN EXPRESSED REFERENCE TO THIS WARRANTY AND LIMITATION OF DAMAGES, SELLER MAKES NO OTHER EXPRESSED OR IMPLIED WARRANTY OR GUARANTEE TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, INCLUDING ANY OTHER EXPRESSED OR IMPLIED WARRANTY OF FITNESS OR OF MERCHANTABILITY, AND NO AGENT OF SELLER IS AUTHORIZED TO DO SO.
